

Whirly Copter

Are you wanting some fun? Do you have a piece of paper? Then you're ready to make this simple but fun flying machine.

What you'll need:

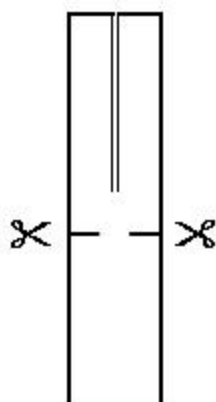

Strip of paper about 2" x 10"
Paper clip
Scissors

1

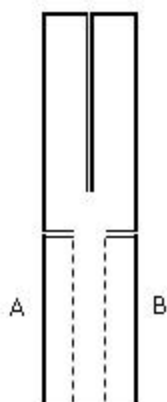

Cut lengthwise about 4½" from one end.

2

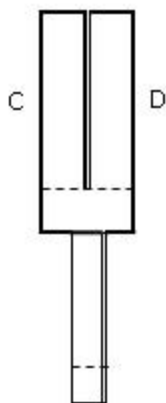

About an inch below that cut make a ½" cut on either side.

3

Fold the A flap over on the dotted line then fold the B flap over the A flap on the dotted line.

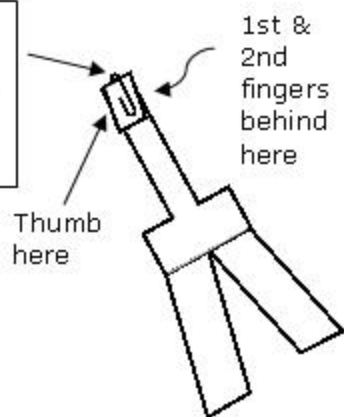

4

Now fold the C piece forward on the dotted line and the D piece backward on the dotted line. Then fold up about 1" from the bottom. You can also put a paper clip on this fold for better whirling.

5

Make sure this is pointed forward when you throw it. Just like throwing an airplane.

To throw your whirly copter put your finger and thumb on either side of the folded (paperclip) area. When you throw it, instead of going across the room, it will come straight down twirling as it lands.
