

How to Draw a Snail

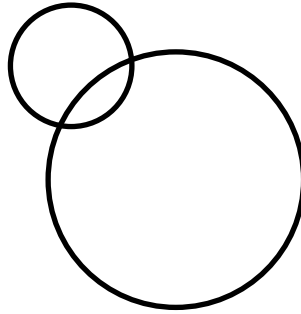

1

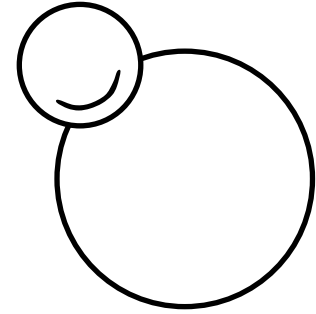

First draw a circle.

2

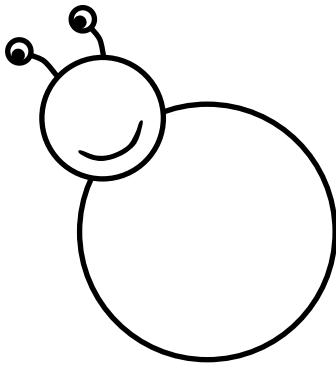

Now draw a second smaller circle on the top edge of the first circle.

3

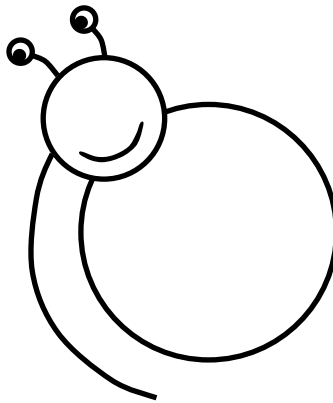

Erase the line where the small circle overlaps the big circle and give your snail a lovely smile.

4

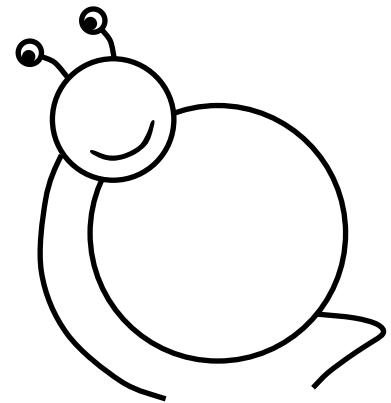

Add two curving lines and top them off with two circles for the eyes. Put two more circles inside for the eye pupils.

5

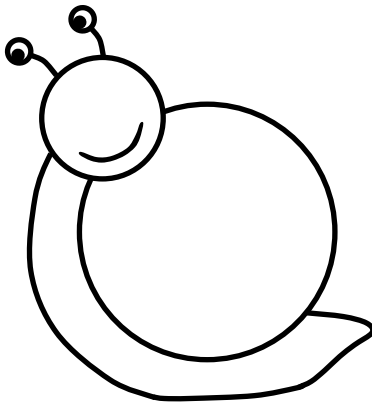

Draw a curved line that goes from the bottom of the snail's head around the front part of the big circle.

6

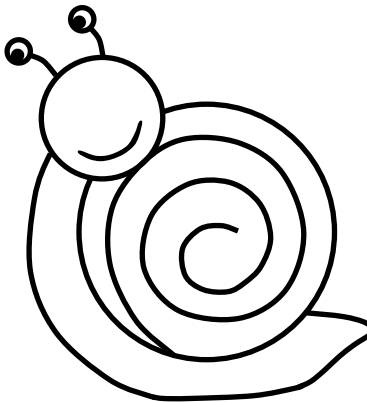

The snail needs a tail. Make a very curved line with a rounded point that attaches to the back of the big circle.

7

Connect the two sections with a fairly straight line to complete his body.

8

Time to make a spiral on the snail shell. Start at the bottom and circle around to the center.
